

Alex Huang

Email: alexander-huang@outlook.com | Melbourne, AU Citizen

LinkedIn: [linkedin.com/in/azhua/](https://www.linkedin.com/in/azhua/) | GitHub: github.com/zerohzz | Website: <https://alex-huang.dev/>

Overview: Senior engineer and technical consultant with 8 years delivering software end-to-end for customers across the public sector, health and aged care, and entertainment - comfortable dropping into an unfamiliar domain, working out what the customer actually needs, and shipping it under real production load. Currently the sole in-house Senior/Lead Salesforce Engineer for a 60+ venue platform across AU, NZ, and the US, owning scoping, build, deployment, and post-launch stabilisation - including the 8-step LWC booking wizard behind 200% online revenue growth and 55 releases over 26 months. Builds enterprise AI in production and picks the model for the problem across Claude, GPT, and Gemini: designed and deployed Ask Alex, a retrieval-augmented agent on Google Cloud (Cloud Run, Vertex AI Gemini, Postgres/pgvector) with grounded citations and a human-escalation tool, and delivered a greenfield agentic AI test framework under an authored Claude Code governance policy. Targeting Forward Deployed / Solutions Engineer and Senior Salesforce + AI Engineer roles — embedding with enterprise customers from first whiteboard to production to design, build, and ship reliable AI systems that meet real security, scale, and reliability standards.

WORKING EXPERIENCES

2023.07 – Present Senior Salesforce Engineer

Funlab, Melbourne

- **Salesforce Platform Engineering:** Sole in-house Senior/Lead Salesforce Engineer owning end-to-end delivery and technical governance of a business-critical Salesforce platform supporting 60+ venues across AU, NZ, and the US. Lead development across an 8-step LWC function-booking wizard (14+ sub-components), Apex trigger frameworks, asynchronous Apex (Queueable, @future, Batch), governor-limit optimisation, bulkification, Flow automation, and REST integrations spanning AvaTax, Stripe/AAPay, and Funlab's proprietary booking stack.
- **DevOps & Release Engineering:** Maintained Azure DevOps CI/CD pipelines using SFDX Git Delta to support reliable delta deployments across Dev, QA, UAT, and Production, enabling a sustained fortnightly release cadence across a multi-org Salesforce estate (led 55 successful sprint releases over 26 months).
- **Technical Leadership & Platform Resilience:** Delivered critical initiatives supporting US expansion, AvaTax tax compliance, connected booking experiences, and omni-channel operational improvements. Led production support, incident response, and remediation across 1,000+ service requests, including revenue-critical hotfixes, payment processing stabilisation, payment-reminder Batch Apex automation, and multi-region SFMC trigger repairs across AU, NZ, and the US.
- **Engineering Enablement, Quality & Governance:** Built reusable technical assets (Apex script repository, SOQL query library, onboarding guides) that cut ramp-up time by 40%, and delivered a greenfield Playwright automation framework augmented by agentic AI and an authored Claude Code developer harness (hooks, skills, MCP, deploy guardrails) under a written governance policy — reducing manual regression effort and improving release confidence.

2021.03 – 2023.06 Consultant / Salesforce Developer

Deloitte | Digital Customer, Sydney

- **Salesforce Development & Configuration:** Delivered Apex development, Flows, Email Services, Custom Objects, Custom Metadata, and Permission Set architecture across multiple client engagements — alongside data migration and cleansing via Salesforce Data Loader.
- **DevOps & CI/CD:** Managed feature branch workflows, pull requests, and peer code reviews in Git — resolving merge conflicts and defects to maintain release integrity across parallel workstreams in a structured Agile delivery environment.
- **BA & Functional Delivery:** Authored user stories and acceptance criteria, designed test cases, performed ST/SIT testing, conducted defect triage, and produced solution documentation and business process maps to resolve ambiguous requirements with BAs and key stakeholders.
- **Client Engagement & Stakeholder Communication:** Facilitated client workshops and playback sessions, translated complex requirements into actionable delivery artifacts (user stories, AC, test cases, process maps), and delivered live demonstrations and interactive training sessions — ensuring stakeholder alignment throughout the project lifecycle.

2018.07 – 2021.02 Technical Consultant

Visible Insights, Sydney

- **SharePoint & LiveTiles Development:** Lead developer and solution architect delivering enterprise intranet solutions across multiple clients — custom web parts, navigation, and metadata/taxonomy, integrated across Microsoft 365 (Teams, OneDrive, Outlook).

- **Microsoft PPM, Reporting & Frameworks:** Implemented Project & Portfolio Management solutions with Power BI/Excel dashboards, and established reusable design frameworks, coding standards, and documentation practices that contributed to business-line expansion.
- **Enterprise Content Management & Governance:** Integrated enterprise content with SharePoint across Microsoft 365 (Teams, OneDrive, Outlook) — establishing information architecture, governance standards, and QA procedures for consistent metadata and cross-platform data flow in regulated environments.
- **Solution Frameworks & Innovation:** Established reusable web-application frameworks, coding standards, and documentation practices to improve delivery consistency — and researched emerging Microsoft 365 technologies to help expand the firm's service line.

PROJECT EXPERIENCE

2026.06 – Present **Ask Alex – Conversational RAG Agent (Google Cloud)** **Personal**

Full-Stack & GenAI – Solo Build

A self-built conversational RAG agent answering natural-language questions over a personal knowledge base, with citation-grounded responses and an escalate-to-human fallback. Built to get hands-on with RAG, vector search, and AI deployment on Google Cloud. Live on alex-huang.dev (site-wide widget + /ask page); code public on GitHub (github.com/zerohzz/Ask-Alex).

- **GCP Architecture:** Node/TypeScript + Hono API on Cloud Run, Vertex AI Gemini for generation and embeddings, secrets in Secret Manager.
- **Vector Search + RAG:** An ingest → chunk → embed → retrieve pipeline over Neon Postgres + pgvector, with citation grounding to reduce hallucination.
- **Tool Calling & Guardrails:** Function/tool calling for citations and human escalation, CORS-scoped multi-origin access, and grounding constraints.

2023.07 – Present **Funlab Salesforce Platform — Transformation, US Expansion & Delivery** **Funlab**

Sole In-House Salesforce Engineer / Solution Design

Sole in-house engineer owning Funlab's Salesforce platform across 60+ venues in AU, NZ, and the US — from pre-go-live digital transformation through US market expansion and ongoing delivery.

- **Digital Transformation & Revenue Interface:** Architected an 8-step LWC function-booking wizard (14+ sub-components) integrating Sales, Service, and Marketing Clouds into a unified guest 360 — the primary revenue interface, contributing to 200% online revenue growth and a 69% lift in conversion.
- **US Market Expansion (Greenfield):** Brought 8 US venues onto the platform with AvaTax multi-state tax compliance, async Apex (Queueable) tax calculations, surcharge automation, and region-specific config — hardening production through AvaTax UNABLE_TO_LOCK_ROW concurrency and governor-limit defects.
- **Platform Resilience, DevOps & Payments:** Ran a fortnightly multi-org release cadence (55 releases / 26 months) on Azure DevOps + SFDX Git Delta, and stabilised revenue-critical payment workflows (deposit automation, Stripe links, payment-reminder Batch Apex) across regions during live production incidents.

2022.12 – 2023.04 **NSW Police Force - Form Digital Transformation** **Deloitte**

Salesforce Lead Developer / Consultant

Project Overview: NSW Police Force was using paper form to receive the Notice to Hold a Public Assembly. Deloitte proposed the implementation of Lightning Web Components (LWC) to create a digital form within the existing community portal. This solution efficiently captures user input and generates custom object records in the backend, streamlining the process and enhancing overall functionality.

Alex joined the project as the main developer, focusing on implementing the LWC form, integrating various components, configuring Salesforce custom objects, and actively participating in requirement gathering and feedback sessions

- **LWC Form Development:** Built the form body using LWC, seamlessly integrating it with existing components and connecting it to the Salesforce custom object. Conducted research on the client's code base, identifying method to reuse and integrate components such as Google Captcha and Address Lookup.
- **Build Process Management:** Utilized git, pull requests, and feature branches to streamline and effectively manage the development process. Change Set Deployment: Successfully deployed over 180 components.
- **Collaboration & Communication:** Actively participated in various meetings and sessions, including on-site and remote demo workshops and handover sessions.
- **System Testing:** Conducted Smoke and Shakedown testing to verify system stability and reliability, ensuring a high-quality product.

2022.01 – 2022.08 **WA Health VMS (Vaccine Management System)** **Deloitte**

Salesforce Developer

Project Overview: The Western Australia's Health department was looking for a system for COVID-19 Vaccine Management and Deloitte was engaged to deliver the VMS system for manage and track vaccination program through

Salesforce platform, includes the vaccine inventory distribution system, vaccinator portal and vaccine recipient portal, etc.

Alex joined the CICD stream of the project and help to design/build the Automation for User Provisioning to reduce the manually effort from 23 to 3 minutes for each user account. He collaborated with the small team as a technical analyst / developer and participated on functional activities, client Communication, Salesforce configuration and apex code development, DevOps / CICD tasks, etc.

- **Salesforce Development:** Apex code development, Email handler with SF Email Service, test class and methods
- **Salesforce Configuration:** configure/migrate Permission Set Groups, create/utilise Custom Object and Custom Metadata, create 7 flows for distinctive features
- **DevOps / CICD:** create/maintain the feature branch and pull requests, manage/resolve merge conflict and defects.
- **Functional activities:** manage user stories and acceptance criteria, create/maintain the Deployment Package, create test cases, solution documentation, defect triage.
- **Client Communication:** create flow/diagram for the solution design, prepare Deck for client workshops/presentation, run Playback Session and live demonstration, feedback gathering and further discussion with client, etc.

SKILLS

- **Salesforce & Platform:** Apex, Lightning Web Components (LWC), SOQL, Flow, Asynchronous Apex (Queueable / Batch / @future), Apex trigger frameworks, REST/SOAP integration, Sales / Service / Marketing / Experience Cloud, governor-limit optimisation, solution architecture
- **Languages:** Apex, SOQL, JavaScript, TypeScript / Node, LWC, Python, Java, C#, SQL, HTML, CSS
- **AI & Agentic:** RAG & vector search (pgvector), citation grounding, conversational agents, Vertex AI Gemini (generation + embeddings), tool / function calling, prompt engineering, tool orchestration, multi-LLM (Claude / GPT / Gemini), Claude Code agents, agentic workflow design, Playwright + AI test automation, AI usage / governance policy
- **Cloud & DevOps:** Salesforce DX (SFDX), SFDX Git Delta, Azure DevOps CI/CD, Git, Google Cloud (Cloud Run, Vertex AI, Secret Manager), Neon Postgres + pgvector, Jest, sandbox lifecycle automation, release management
- **Integrations & Data:** REST APIs, Named Credentials, Remote Site Settings, AvaTax, Stripe / AakPay, Conga Composer / Sign, Typeform, Salesforce Data Loader, data migration, multi-region async processing
- **Delivery:** End-to-end SDLC, Agile delivery, customer co-build, on-site workshops, business process mapping, technical leadership, multi-stakeholder communication
- **Spoken Languages:** English, Mandarin, Cantonese

EDUCATION

- | | | |
|--------------------------|---|-------------------|
| 2017.07 - 2018.12 | Master of Business Information system | Monash University |
| | Core study: Industry experience studio project, Data exploration and visualisation, User interface design and usability, Business intelligence modelling, Data science | |
| 2014.02 – 2016.12 | Bachelor of Computer Science | Monash University |
| | Core study: Theory of computation, Algorithms and data structures, Project management, Data management, Advanced programming, Android and iOS development | |

CERTIFICATION

Salesforce

Certified Administrator
Certified Platform App Builder
Certified Platform Developer I
Certified Business Analyst

Microsoft

MS-339: Managing Microsoft SharePoint Server 2016
MS-347: Enabling Office 365 Services
MS-348: Managing Projects and Portfolios with Microsoft PPM
MS-778: Analyzing and Visualizing Data with Power BI
